

JOBTRACK

Job Search & Interview Tracker App

Detailed User Manual

Organize applications. Prepare for interviews. Follow up on time. Compare offers.

PURPOSE OF THIS GUIDE

This manual explains every major area of JobTrack, including demo mode, activation, installation, profile setup, applications, interviews, follow-ups, company research, contacts, offers, analytics, backup and restore, and troubleshooting.

JobTrack is a local-first career organization tool. It helps you keep your job search structured in one place. It does not submit applications, send emails, contact recruiters, or create calendar events automatically.

JOBTRACK AT A GLANCE

- 1 TRACK OPPORTUNITIES** - Capture applications, priorities, salary ranges, sources, next-step dates and Job Match Scores. Use Pipeline to see what is moving and what is stuck.
- 2 PREPARE CONVERSATIONS** - Plan interviews, keep company research and professional contacts together, and create follow-ups so important conversations do not disappear.
- 3 COMPARE & PROTECT** - Compare offers beyond salary, review Analytics, personalize your workspace, install the app, and protect your history with local backups.

LOCAL-FIRST WORKSPACE

Your job-search data stays in the browser on the device you use. JobTrack does not require an online account. Export backups regularly if the information matters to you.

TYPICAL JOB SEARCH FLOW

1 SAVE	2 APPLY	3 INTERVIEW	4 DECIDE
Capture a role worth considering.	Record the submission and next step.	Prepare, research and follow up.	Compare the full offer and fit.

00 Contents

Use this page as your navigation map through the manual.

01 Start here - Quick setup	02 Demo mode and full activation
03 Install JobTrack on desktop or mobile	04 Dashboard - Career Momentum
05 Profile and personal preferences	06 Applications and Job Match Score
07 Pipeline - Your job search CRM	08 Interviews and preparation
09 Follow-ups and next actions	10 Companies - Research center
11 Contacts - Networking CRM	12 Offers - Compare opportunities
13 Analytics - Understand what works	14 Search, theme and mobile navigation
15 Backup, restore and local data	16 Sample data and safe cleanup
17 Recommended weekly workflow	18 Troubleshooting and FAQ

Important: The activation code is supplied with your purchase. This manual intentionally explains where to enter it without printing the code itself.

01 Start here - Quick setup

A complete first-time setup takes only a few minutes.

- 1 Open JobTrack** - Use the app link supplied with your purchase. For the best installation and offline experience, open the HTTPS link in a modern browser.
- 2 Explore the sample workspace** - The app includes fictional records so you can understand the Dashboard, Pipeline, Interviews, Follow-ups, Companies, Contacts, Offers and Analytics before entering your own data.
- 3 Set up your profile** - Open Settings and enter your name, target role, location, work preference, target salary and currency. USD is the default currency, but you can type another currency manually.
- 4 Add your first real application** - Click + Add application. Enter the role, company, status, priority, salary information, next step and Match Score ratings.
- 5 Schedule the next action** - If an interview or follow-up is already known, add it immediately. This keeps the Dashboard focused on what needs attention.
- 6 Activate when ready** - Demo mode allows up to 20 record-changing operations. Enter the activation code included with your purchase to remove the demo limit.
- 7 Export a backup** - After you start entering real data, create a JSON backup from Settings. Keep the backup somewhere safe.

BEST PRACTICE

Do not wait until you have dozens of applications. Add each opportunity when you save or apply to it, and always enter a Next step date when possible.

02 Demo mode and full activation

Try the real workflow first, then unlock unlimited tracking.

What Demo 0 / 20 means

The sidebar shows your demo usage as Demo X / 20. The counter is designed to let you test the app with real interactions before activation. Most changes to tracker records use one demo operation.

Demo behavior	What happens
Usually counts	Adding, editing or deleting an application, interview, follow-up, company, contact or offer.
Also counts	Changing an application stage from the Pipeline and marking a follow-up Done or Reopen.
When the limit is reached	JobTrack blocks additional record changes and opens the activation prompt.
Sample records	The fictional sample records are already included so you can explore the interface without first building a dataset.

How to activate

- 1 Open Activation** - Click Activate full app in the sidebar, or go to Settings > Activation > Activate full app.
- 2 Enter your code** - Type the activation code exactly as supplied with your purchase. JobTrack accepts the code in upper or lower case and checks it locally.
- 3 Click Activate** - When the code is accepted, the app displays Full access and the 20-operation limit is removed.

IMPORTANT

Activation is stored locally in the browser you are using. If you switch to another browser/device or clear that browser's site data, you may need to enter your activation code again.

KEEP YOUR PURCHASE DOCUMENT

Store the PDF or message containing your activation code somewhere safe. A data backup does not replace the activation code.

03 Install JobTrack on desktop or mobile

Use JobTrack like an app and keep it available for offline use after the initial setup.

Desktop - Chrome or Edge

- 1 Open the HTTPS app link** - The Install App feature works when JobTrack is served securely, such as from the published GitHub Pages link.
- 2 Click Install App** - Use the Install App button in the top bar or Settings > Install JobTrack.
- 3 Confirm installation** - Accept the browser installation prompt. JobTrack can then open in its own app-style window.
- 4 If no prompt appears** - Open the browser menu and choose Install app, Apps > Install this site as an app, or Add to Home Screen depending on your browser.

Android - Chrome

- Open the JobTrack HTTPS link in Chrome.
- Tap Install App inside JobTrack. If Chrome does not show the prompt, open the browser menu and choose Install app or Add to Home screen.
- Open JobTrack from the new home-screen/app icon.

iPhone / iPad - Safari

- Open the JobTrack link in Safari.
- Tap Share.
- Choose Add to Home Screen, then confirm Add.
- Launch JobTrack from the Home Screen icon.

OFFLINE NOTE

Offline support becomes available after the app has been loaded successfully from its published site and the browser has cached the application files. Do not clear browser/site data unless you have exported a backup first.

DIRECT FILE MODE

If you open index.html directly from a Windows folder, JobTrack can run as a web page, but the Install App prompt is not available. Use the published HTTPS link for installation.

04 Dashboard - Career Momentum

Your daily command center for priorities, interviews, active opportunities and search health.

Field	How to use it
Greeting	Uses the time of day and, if you saved a profile, your first name.
Momentum Score	A directional score influenced by recent applications, upcoming interviews, current offers and overdue follow-ups.
Applications	Total tracked opportunities, including completed outcomes.
Active	Opportunities that are not Hired, Rejected or Withdrawn.
Interviews	Applications currently in Interview or Final Interview stages.
Offers	Applications currently at the Offer stage.
Follow-ups due	Open follow-ups whose due date is today or earlier.
Average Match	Average Job Match Score across active applications.
Priority actions	Near-term follow-ups, interviews and saved roles that need attention.
Job Search Health	Application activity, follow-up consistency, pipeline strength and interview conversion.
Smart Next Move	A context-based suggestion generated from your current records.
Top opportunities	Active roles with the strongest Match Scores.
Interview runway	Upcoming interviews, sorted by date and time.

HOW TO USE THE DASHBOARD

Start here each day. Complete overdue follow-ups first, prepare near-term interviews, then work on high-match roles. The Dashboard is designed to reduce random job-search activity and keep attention on the strongest next action.

05 Profile and personal preferences

Personalize the workspace without creating an online account.

JobTrack does not require a username/password account. Your profile is a local workspace identity used to personalize the sidebar and Dashboard.

Field	How to use it
Full name	Shown in the sidebar. Your initials are used for the profile avatar.
Target job title	Appears under your name in the sidebar. Use the role you are actively targeting.
Location	Your city, region or preferred job market.
Email	Stored locally as part of your profile reference.

Field	How to use it
LinkedIn URL	Store your main professional profile link.
Preferred work type	Remote, Hybrid, On-site or Flexible.
Target salary	Your desired salary benchmark.
Currency	Defaults to USD. You can type a currency manually. Standard 3-letter codes such as USD, EUR, GBP or RON are recommended.

Save and reset

- Click Save profile to keep your changes in the current browser.
- Reset profile clears only profile fields. It does not delete applications, interviews, follow-ups, companies, contacts or offers.
- Profile data is included in exported backups.

CURRENCY ENTRY

For the best money formatting, use a three-letter currency code such as USD, EUR, GBP, RON, CAD or AUD. JobTrack automatically converts a three-letter code to uppercase.

06 Applications and Job Match Score

Track every opportunity from Saved to Hired, with a clear priority and next step.

Application fields

Field	How to use it
Job title	The role you are considering or applying for.
Company	Employer or organization name.
Status	Saved, Applied, Screening, Interview, Final Interview, Offer, Hired, Rejected or Withdrawn.
Priority	High, Medium or Low.
Work style	Remote, Hybrid or On-site.
Location	City, country, region or Remote.
Salary min / max	Optional salary range for the opportunity.
Currency	Defaults to USD but can be typed manually.
Source	LinkedIn, Indeed, Company website, Referral, Recruiter, Networking or Other.
Applied date	Date you submitted the application. Leave blank if the role is only Saved.
Next step date	The date you want to review, follow up, interview or take another action.
Job URL	Original job posting or careers page link.
Notes	Requirements, resume version, recruiter details, reasons the role stands out, or anything important.

Job Match Score

Rate six factors from 1 to 5: Role fit, Salary, Remote/Flexibility, Career growth, Benefits and Company interest. JobTrack averages the six ratings and converts them to a percentage.

Score range	Suggested interpretation
80-100%	Strong match - usually worth prioritizing if the role is realistic and active.
60-79%	Medium match - review the trade-offs and decide whether the opportunity deserves time.
Below 60%	Lower match - useful for visibility, but consider whether it supports your goals.

EXAMPLE

If you rate the six factors 5, 4, 5, 4, 4 and 5, the score is 27 out of 30, or 90%.

06 Applications - Filters, editing and safe deletion

Use the Applications table for detailed management and the Pipeline for stage movement.

- 1 Add a role** - Click + Add application from the top bar, Dashboard or Applications page.
- 2 Filter your list** - Use All statuses and All priorities filters to narrow the table.
- 3 Edit a record** - Use the Edit action on an application to update any field. Saving an edited sample record makes it part of your working data.
- 4 Set a next step** - Use Next step date whenever possible. This feeds the Dashboard and helps keep opportunities from going stale.
- 5 Delete carefully** - Deleting an application permanently removes it from this browser.

LINKED RECORDS ARE ALSO REMOVED

When you delete an application, JobTrack also removes interviews, follow-ups and offers linked to that application. Export a backup first if the information may be needed later.

Recommended status definitions

Field	How to use it
Saved	Interesting role not yet submitted.
Applied	Application submitted, waiting for response.
Screening	Recruiter or initial screening stage.
Interview	Active interview stage.
Final Interview	Final or near-final conversation.
Offer	Formal or actionable offer received.
Hired	Role accepted / process successfully completed.
Rejected	Employer closed the process or declined the application.
Withdrawn	You chose to leave the process.

07 Pipeline - Your job search CRM

See active opportunities as a visual workflow and move them forward as the process changes.

The Pipeline displays the active stages Saved, Applied, Screening, Interview, Final Interview and Offer. Each card shows the role, company, priority, next step and Match Score.

- 1 Review each column** - Look for too many roles sitting in Saved or Applied without a next step.
- 2 Change stage** - Use the status selector on a card to move an application to another status.

3

Use terminal outcomes - When you change a card to Hired, Rejected or Withdrawn, it leaves the active Pipeline board but stays in your Applications and Analytics history.

4

Watch next-step dates - If a card has no next date, add one from Edit Application so the opportunity remains actionable.

CRM HABIT

Every active application should answer two questions: What stage is it in? What happens next? If either answer is unclear, update the record.

What a healthy pipeline looks like

- Saved: a small shortlist of roles worth reviewing, not an endless bookmark list.
- Applied: recent submissions with a follow-up plan.
- Screening / Interview: preparation notes and scheduled next steps.
- Offer: decision deadline, compensation and fit captured in Offers.

08 Interviews and preparation

Keep schedule details and preparation notes linked to the exact application.

Field	How to use it
Application	Select the application the interview belongs to.
Interview type	Recruiter Screen, Phone Screen, Hiring Manager, Technical, Portfolio, Panel or Final Interview.
Format	Video, Phone or In person.
Date / Time	When the interview takes place.
Interviewer	Recruiter, manager or panel contact name.
Meeting link / location	Video meeting name/link or physical location.
Preparation notes	STAR stories, examples, role requirements, metrics, portfolio points or talking points.
Questions to ask	Questions you want to ask the interviewer.

Recommended preparation method

1

Read the job description again - Identify the 3-5 responsibilities most likely to be tested.

2

Prepare evidence - Add short STAR examples for achievements, difficult situations and measurable outcomes.

3

Research the interviewer/company - Use Companies and Contacts so research is not scattered across notes.

4

Write questions - Save thoughtful questions before the call, not five minutes before it starts.

5

Review the Dashboard - Upcoming interviews appear in Interview Runway and near-term items appear in Priority actions.

TIME ZONES

JobTrack stores the time you enter; it does not automatically convert time zones. Enter the local time you intend to follow and note the time zone in the location/prep notes when needed.

09 Follow-ups and next actions

Turn waiting into a deliberate process without losing recruiter or networking conversations.

Field	How to use it
Related application	Link the follow-up to a role, or choose General / no application.
Follow-up type	Application check-in, Thank-you note, Recruiter reply, Networking follow-up, Offer follow-up or Other.
Due date	The date you want the task surfaced.
Notes	What you need to send, ask or remember.

Working with follow-ups

- Open follow-ups are sorted ahead of completed items.
- Tasks due today or overdue receive stronger visual attention.
- Click Done when completed. You can Reopen a completed follow-up if needed.
- Near-term follow-ups can appear in Dashboard Priority actions.
- Overdue follow-ups reduce your Dashboard Momentum and Job Search Health signals.

SUGGESTED TIMING

After an interview, create a Thank-you note follow-up immediately. For an application with no response, use a check-in date that fits the employer and role rather than repeatedly contacting them.

10 Companies - Research center

Keep employer research separate from application notes so it can be reused across multiple roles.

Field	How to use it
Company name	Organization you are researching.
Industry	Market or business category.
Website	Main website or careers page.
Size	Approximate employee count or company-size range.
Culture score	1 Poor fit to 5 Excellent.
Benefits	Health, PTO, pension, remote policy, learning budget and other known benefits.
Research notes	Products, leadership, funding, culture, competitors, role context, interview insights or concerns.

What to research before an interview

- What the company sells or provides and who its customers are.
- Recent growth, product changes or business priorities.
- How your target role contributes to business outcomes.
- Work model, location expectations and benefits.
- Questions or concerns you want clarified during interviews.

AVOID DUPLICATE RESEARCH

If you apply to several roles at the same employer, keep shared information in Companies and role-specific information in each Application.

11 Contacts - Networking CRM

Keep recruiters, hiring managers, referrals and useful professional contacts connected to your search.

Field	How to use it
Name	Contact person.
Role	Recruiter, Hiring Manager, Referral, Talent Partner, Former colleague, etc.
Company	Where the contact works.
Email	Contact email if available.
LinkedIn / profile URL	Professional profile or contact link.
Last contact	Most recent date you communicated.
Notes	Context, relationship, promises, referrals, useful details and next conversation ideas.

Good contact notes are short and actionable

- How you know the person.
- Which opportunity or company they are connected to.
- What was discussed last time.
- Whether they offered a referral, introduction or information.
- What you should do next and when.

PRIVACY

Contact data stays in your browser and backup file. Store only information you genuinely need for your job search.

12 Offers - Compare opportunities

Compare more than salary before you accept a role.

Field	How to use it
Application	The opportunity the offer belongs to.
Base salary	Annual or agreed base amount.
Currency	Defaults to USD but can be changed manually.
Bonus / equity	Annual bonus, commission, equity or other variable compensation.
PTO	Vacation / paid time off.
Work style	Remote, Hybrid or On-site.
Decision deadline	Date the employer expects a decision.
Overall score	Your subjective overall fit rating from 1 to 10.
Benefits	Health, pension, learning, equipment, allowances and other benefits.
Notes	Negotiation details, trade-offs, start-date points or decision reasoning.

Offers are sorted by Overall score. When there is more than one offer, the highest-scored offer is visually marked as Best Fit.

AUTOMATIC STATUS UPDATE

When you save an offer linked to an active application, JobTrack moves that application to Offer unless it is already Hired, Rejected or Withdrawn.

Compare the whole package

- Base salary and variable compensation.
- Career growth and manager quality.

- Remote flexibility and commute impact.
- PTO and benefits.
- Role fit and daily responsibilities.
- Company confidence, stability and personal interest.

13 Analytics - Understand what works

Use your own history to improve where you apply and how you spend your time.

Field	How to use it
Applications	Total number of tracked opportunities.
Interview rate	Share of all applications that reached Interview, Final Interview, Offer or Hired.
Offer rate	Share of all applications that reached Offer or Hired.
Average Match	Average Job Match Score across active applications.
Pipeline conversion	Counts of applications by status.
Sources	Counts of opportunities from LinkedIn, Indeed, referrals, recruiters, networking, company websites and other sources.

How to interpret the numbers

- Low interview rate: review targeting, resume alignment and application quality.
- Good interview rate but low offer rate: strengthen interview preparation and role-fit communication.
- Strong source performance: spend more time on the channels producing real conversations.
- High number of low-match active roles: narrow the pipeline and focus on fit.

USE TRENDS, NOT ONE WEEK

Small job-search datasets can change dramatically after one interview or offer. Look for patterns across enough applications before changing strategy.

14 Search, theme and mobile navigation

Small tools that make a large dataset easier to use.

Global search

Use the search box in the top bar to quickly filter Applications, Companies, Contacts and Interviews. Search works against common text such as role titles, company names, contact details and notes.

Light / dark mode

- Use the half-circle theme button in the top bar or Settings > Theme > Toggle light / dark.
- The selected theme is saved in the browser for future sessions.

Mobile navigation

- On smaller screens, use the hamburger menu to open the sidebar.
- Choose a section, then the menu closes so the content has more screen space.
- Forms and cards adapt to phone/tablet layouts.

Quick Add

The + Add application button in the top bar is the fastest way to capture a new opportunity from almost anywhere in the app.

SEARCH SCOPE

The global search is designed for Applications, Companies, Contacts and Interviews. Use each dedicated page to review Follow-ups, Offers and Analytics.

15 Backup, restore and local data

Protect your job-search history before browser changes, device moves or cleanup.

Export a backup

- 1 **Open Settings** - Go to Backup & restore.
- 2 **Click Export backup** - JobTrack downloads a JSON file named similar to jobtrack-backup-YYYY-MM-DD.json.
- 3 **Store it safely** - Keep a copy in a folder or cloud drive you control. Export a new backup whenever your data becomes important or changes substantially.

Restore a backup

- 1 **Activate full access** - Restore is available after full activation.
- 2 **Click Restore backup** - Select a JobTrack JSON backup file.
- 3 **Confirm the result** - JobTrack loads the profile, applications, interviews, follow-ups, companies, contacts and offers from the selected backup.

RESTORE REPLACES TRACKER COLLECTIONS

Restoring a backup replaces the current tracked data collections with the contents of the backup. Export the current state first if you may want to return to it.

WHAT THE BACKUP DOES NOT REPLACE

Your activation code is not a substitute for a data backup, and the backup does not serve as your activation document. Keep both separately.

Local-first storage

JobTrack stores working data in the browser on the current device. There is no automatic cloud account sync. Clearing site data, resetting the browser profile, or using a different device can create a separate empty workspace unless you restore a backup.

16 Sample data and safe cleanup

Learn from the fictional workspace, then remove it without deleting your own records.

The demo workspace includes a realistic set of fictional records so every major screen is populated from the first launch.

Field	How to use it
Applications	16 fictional opportunities across Saved, Applied, Screening, Interview, Final Interview, Offer, Hired, Rejected and Withdrawn.
Interviews	5 sample interview records.
Follow-ups	7 sample next-action records.
Companies	5 sample company research records.
Contacts	4 sample networking contacts.
Offers	2 sample offers for comparison.

Clear demo data

- 1 **Open Settings** - Find the Sample data card.
- 2 **Click Clear demo data** - Read the confirmation message carefully.
- 3 **Confirm** - JobTrack removes fictional records while keeping records you created yourself.

EDITED SAMPLE RECORDS

If you edit a sample record and save it, JobTrack treats the saved record as part of your working data. Clear demo data may therefore leave that edited record in place. Delete it manually if you no longer need it.

17 Recommended weekly workflow

A simple system for keeping JobTrack useful instead of turning it into another list.

Daily - 5 to 10 minutes

- 1 **Open Dashboard** - Check overdue follow-ups and interviews happening soon.
- 2 **Complete one priority action** - Send the follow-up, prepare the interview, or apply to the strongest saved role.
- 3 **Update stages** - Move any application whose status changed.
- 4 **Capture new information** - Add recruiter names, interview notes, company research or new deadlines while they are fresh.

Weekly - 20 to 30 minutes

- 1 **Review Analytics** - Look at interview rate, offer rate and source performance.
- 2 **Clean the Pipeline** - Withdraw roles you no longer want and update stale next-step dates.
- 3 **Review high-match roles** - Prioritize strong-fit applications before adding more low-fit opportunities.
- 4 **Export a backup** - Keep a recent copy of your working data.

QUALITY OVER VOLUME

The Match Score and Pipeline are most useful when they help you say no to weak opportunities, not only when they help you track more applications.

18 Troubleshooting and FAQ

Common questions and the safest first steps.

Install App does not work

Make sure you opened the published HTTPS link, not index.html directly from a local folder. On iPhone/iPad use Safari > Share > Add to Home Screen.

I reached Demo 20 / 20

Open Activate full app and enter the code supplied with your purchase.

My activation disappeared

Activation is local to a browser/device. If browser data was cleared or you changed browser/device, enter the activation code again.

My data is missing on another device

JobTrack does not automatically sync between devices. Export a backup on the original device, activate the destination browser, then restore the backup.

Restore backup is blocked

Backup restore requires full activation.

My currency is wrong

Open the relevant Profile, Application or Offer record and type the correct currency. USD is the default. Standard 3-letter codes such as EUR or RON are recommended.

A deleted application removed other items

Deleting an application also deletes linked interviews, follow-ups and offers. Restore a backup if you need to recover the previous dataset.

A sample record remains after Clear demo data

An edited sample record can become working data. Delete that individual record manually if it is no longer needed.

The Dashboard score changed

Momentum and Job Search Health are dynamic. Recent applications, upcoming interviews, offers and overdue follow-ups can change the scores.

I want to reset only my identity

Use Settings > Reset profile. This clears the profile but leaves tracker records intact.

Can JobTrack send reminders or emails?

No. JobTrack organizes due dates and next actions inside the app. It does not automatically send email, push notifications or calendar invitations.

Can I use JobTrack offline?

After the published app has loaded successfully and its offline files are cached, installed/PWA use can work offline. Keep backups because browser storage remains local.

19 Quick reference

The shortest possible operating guide.

Field	How to use it
Add opportunity	Top bar > + Add application.
Change stage	Pipeline > choose a new status on the application card.
Prepare interview	Interviews > + Add interview > link to the application.
Create reminder task	Follow-ups > + Add follow-up > choose a due date.
Research employer	Companies > + Add company.
Save recruiter/referral	Contacts > + Add contact.
Compare offer	Offers > + Add offer.
See performance	Analytics.
Personalize workspace	Settings > Profile.
Change currency	Type it manually; default is USD.
Activate	Sidebar or Settings > Activate full app.
Install	Install App button, or browser Add to Home Screen.
Backup	Settings > Export backup.
Restore	Settings > Restore backup - requires full activation.
Remove examples	Settings > Clear demo data.
Theme	Top bar theme button or Settings > Toggle light / dark.

FINAL RECOMMENDATION

Keep one clear next action for every active opportunity, export backups regularly, and use the Match Score to protect your time for the roles that fit you best.

JobTrack - Job Search & Interview Tracker App

Private. Local-first. Built to keep your job search organized.

BEFORE YOU CLOSE JOBTRACK

- 1 Update the stage** - If an employer replied, move the application to the correct Pipeline stage.
- 2 Set the next action** - Every active opportunity should have a clear next step or next-step date whenever possible.
- 3 Capture what changed** - Add interview notes, recruiter details, company research or offer information while it is still fresh.
- 4 Protect your data** - Export a fresh backup regularly, especially before changing browsers, clearing site data or moving devices.

ONE QUESTION TO END EACH SESSION

For every active opportunity, you should be able to answer: What happens next? If the answer is unclear, update the record before you leave the app.
